

AMENDMENTS TO THE SPECIFICATION

1. Please amend paragraph [0004] on page 2, lines 3-7, as follows:

Sub
B1
a1
[0004] The laser printer comprises a paper-distributing unit for transferring paper from a stack of paper disposed in a tray to a paper-transferring path, a developing device which forms a toner image based on a printing signal on a photosensitive drum by means of an electrophotographic process, and which ~~transfer~~ transfers the toner image from the paper distributing unit to the transferred paper, and a settling unit for settling the toner image transferred to the paper.

2. Please amend paragraph [0026] on page 9, lines 6-11, as follows:

A2
[0026] As described above, according to the present invention, by forming the mass body 22a on the pivot 22 so as to add mass to the pivot 22 in the photosensitive drum 23, the noise and the vibration of the developing device 20, caused by friction between the photosensitive drum 23 and the rollers 24, 27 and 29, ~~is~~ are absorbed at the mass body 22a. Moreover, since the frequency of the pivot 22 is changed, exacerbation of the noise and the vibration due to a resonance among the noise, vibration frequency, and the natural frequency of the pivot 22 can be prevented.
